

/Why Retailers Choose ForgeRock

We deliver better customer experiences to drive revenue

What We Do

Meet ForgeRock. We're an identity and access management company.

We secure digital identities for people, devices, and connected things online. We verify who you are and what you can access.

Our commercial open source identity management platform powers new cloud, mobile, and IoT services, so you can build secure, trusted relationships with customers and citizens anywhere, on any device.

How We Do It

We tie digital identities together, so a person, their devices, their connected things, and all the services they use are consolidated into a single user profile. This makes it easy to personalize and protect customer services across channels. We use continuous, contextual identity data to spot unusual circumstances anytime and anywhere. And we satisfy users with the power to set their own privacy preferences.

We offer the only commercial open source identity platform uniquely designed as a unified solution, with a single REST API for invoking any identity service. Flexible enough to handle any digital application on premises or in the cloud, our platform scales to handle hundreds of millions of identities and deploys fast - at the pace of today's business.

CREATE AN OMNICHANNEL EXPERIENCE

Consolidate the identity data of users, their devices, and connected things to create a unified customer profile across all digital channels. Connect previously siloed lines of business so every interaction across all channels, both physical and digital, is consistent and personalized.

ACCELERATE CUSTOMER ENGAGEMENT

Reduce registration and transaction friction with single sign-on and social sign-on capabilities. Provide a single self-service platform for customers to manage their accounts. Enable innovative mobile experiences that drive customer engagement, in-store and online.

BUILD TRUSTED RELATIONSHIPS WITH PRIVACY & CONSENT

Enable customers to selectively and securely share personal data in exchange for value-added offerings.

PROTECT BRAND REPUTATION WITH CUTTING-EDGE SECURITY

Real-time, responsive, round-the-clock security that verifies who customers are and what they can access, from login to session log out. Adaptive to context, requiring additional identity verification when risk factors are present.

PREPARE FOR IOT SCALE

Optimize supply chain operations and create new revenue streams. Assign digital identities to hundreds of millions of connected devices and things like smart tags, smart shopping carts, wearables, sensors, beacons and whatever's coming next.

LEVERAGE COMMERCIAL OPEN SOURCE

Deploy a production-ready, highly flexible, and extensible platform for a transparent and collaborative approach to the development process.

ForgeRock as of today is the leading open source IAM/IAG vendor...ForgeRock has a well thought-out platform and integration strategy with a comprehensive set of REST APIs."
